COVID19 Safety procedure guidelines

Issue 2

Feb 2021

Please note these are only guidelines and you may wish to agree better process with your cleaner / client bearing in mind we are an eco-friendly cleaning company using only eco-friendly cleaning solutions. These below suggestions are based on articles* suggesting the use of Liquid soap and Bleach based products to sanitise with are the best solution to remove corona viruses from surfaces. Bleach in eco-friendly realm is Hydrogen Peroxide which is a natural bleach and kills viruses & bacteria as effectively as Sodium Hypochloride based bleach, which is the toxic version.

Protective wear:

- Cleaners to ensure to wear clean clothing each day to minimise virus spread between homes
- Cleaners to use single use gloves and face mask (where possible / needed)

Products to use and cleaning procedure:

- [Liquid Soap](#) to wash all surfaces down (step 1)
- [Hydrogen Peroxide 3% food grade](#) to sanitise surfaces (step 2)
- [70% Isopropyl alcohol](#) to wet cloths to wipe down high touch areas ie. light switches & doorknobs.. (step 3)

Advise to cleaning Pixies & Clients:

- *All cleaners are advised to:*
 - to ensure their equipment & all cleaning products have been wiped on a daily basis with cloth wet with 70% Isopropyl Alcohol
 - ensure to use new cloths & sponges on each visit
 - “clean their way out” of their client’s homes, to be methodical when cleaning
- *Clients are advised to:*
 - ideally vacate their property where possible, if not they are asked to remain in a separate part of the property to the cleaner.
 - Remain flexible as cleaners may need some extra time due to the nature of this extra safety procedure that needs to be taken.
